EXECUTIVE SUMMARY

The Zebulon Cook Out proposed development is located east of NC 96 between Dogwood Drive and Jones Street in Zebulon, NC. It will consist of 2,800 square feet of fast food restaurant with drive-thru and 1,825 square feet of party gathering room. One full movement access point is proposed on Dogwood Drive. The expected build-out year for this development is 2024. Information regarding the property was provided by Sambatek.

DAVENPORT was retained to determine the potential traffic impacts of this development and to identify transportation improvements that may be required to accommodate the impacts of the new development traffic.

The Transportation Impact Analysis (TIA) was performed based on the scope agreed upon with Town of Zebulon and the North Carolina Department of Transportation (NCDOT). This site has a trip generation potential of 1,854 daily trips, 238 trips in the Mid-day peak hour, and 218 trips in the PM peak hour.

In conclusion, this study has determined the potential traffic impacts of this development and recommendations have been given where necessary to mitigate the impacts of future traffic. The analysis indicates that with the recommended improvements in place, the proposed site is not expected to have a detrimental effect on transportation capacity and mobility in the study area. The recommendations summarized in Figure A and in Table A should be constructed to comply with applicable NCDOT *Policy on Street and Driveway Access to North Carolina Highways* and local standards.

Table A – Recommended Improvements	
INTERSECTION	**RECOMMENDATIONS**
NC 96 at Dogwood Drive/ US 264 Westbound Ramp	Implemented by others: • Modify signal to split phasing on the side-streets to accommodate the volumes from the ramps. • Optimize the splits.

1.0 Introduction

The Zebulon Cook Out proposed development is located east of NC 96 between Dogwood Drive and Jones Street in Zebulon, NC. It will consist of 2,800 square feet of fast food restaurant with drive-thru and 1,865 square feet party gathering room. One full movement access point is proposed on Dogwood Drive. The expected build-out year for this development is 2024. Information regarding the property was provided by Sambatek.

A conceptual site plan is shown in Figure 1, and a site location map and a vicinity map are provided in Figures 2A and 2B, respectively.

DAVENPORT was retained to determine the potential traffic impacts of this development and to identify transportation improvements that may be required to accommodate the impacts of the new development traffic. The following intersections are included in the study:

1. NC 96 (Arendell Avenue) at Dogwood Drive/ US 264 Eastbound Ramp (signalized)
2. NC 96 (Arendell Avenue) at US 264 Westbound Ramp (signalized)
3. NC 96 (Arendell Avenue) at Pearces Road (signalized)
4. Dogwood Drive at Site Access 1 (unsignalized)
5. NC 96 (Arendell Avenue) at Green Pace Road (unsignalized)
6. Pearces Road at Proctor Street (unsignalized)

These intersections were analyzed during the Mid-day and PM peaks for the following conditions:

- 2023 Existing Conditions
- 2024 Future No Build Conditions
- 2024 Future Build Conditions
- 2024 Future Build Conditions + Improvements

The Transportation Impact Analysis (TIA) was performed based on the scope agreed upon with Town of Zebulon and the North Carolina Department of Transportation (NCDOT). It was conducted according to the standards and best practices of the transportation engineering profession.

2.2 Existing Traffic Volumes

Turning movement counts for this project were collected by Burns Services, Incorporated when schools were in session. Table 2.2 contains the location, dates, and times these counts were conducted. The traffic volumes were not balanced between the study intersections since the existing driveways and land uses account for the imbalance. Additionally, a minimum of four vehicles per hour were assigned to all movements, per NCDOT Congestion Management standards. The existing Mid-day and PM peak hour volumes are shown in Figure 4. Traffic count data are provided in the Appendix.

3.0 Approved Development and Committed Improvements

3.1 Approved Developments

Approved developments are developments that have been recently approved in the area but are not yet constructed. According to Town of Zebulon, there are approved developments in the area. However, with lack of information a 2% background growth will accommodate the growth in the area.

3.2 Committed Improvements

Committed improvements are improvements that are planned by NCDOT or the Town that are associated with a prior approved development in the area but are not yet constructed. Per the approved scoping document, there are two (2) committed improvements to be included in this study. The existing unsignalized intersection of NC 96 at Green Pace Road, is planned to be signalized in the future. The other committed improvement is widening and restricting access on NC 96 with medians from Dogwood Drive to the proposed Highway 55 Burger driveway. Future no build and future build models reflect these improvements. Relevant information is provided in the Appendix.

4.0 Methodology

4.1 Base Assumptions and Standards

In general, the analysis for this project was conducted utilizing commonly accepted NCDOT standards. Table 4.1 contains a summary of the base assumptions.

Table 4.1 - Assumptions	
Annual Growth Rate	2%
Analysis Software	Synchro/SimTraffic
Lane Widths	12 feet
Peak Hour Factor	0.90
Truck Percentage	2%

4.2 Future No Build Volumes

The 2024 future no build traffic volumes were computed by applying a two percent (2%) compounded annual growth rate to the 2023 existing traffic volumes. Figure 5 shows 2024 future no build traffic volumes for Mid-day and PM peaks.

4.3 Trip Generation

The proposed development will contain a fast-food restaurant. The trip generation potential of this site was customized by collecting data at an existing Cook Out that is similar in size for three days. This location also had similar population demographics and roadway surroundings. This data was then averaged to determine the daily total, Mid-day peak and PM peak. This methodology was agreed upon and approved by the reviewing agencies. Table 4.2 presents the results.

Pass-by trips are defined as trips already on the adjacent street that will turn into the site, and then exit to continue in the direction they were originally traveling. Pass-by rates were applied to the restaurant land use.

Table 4.2 – Custom Cook Out Restaurant Trip Generation

4.4 Trip Distribution and Assignment

Site trips for this proposed development were distributed based on the existing traffic patterns and engineering judgment. The primary trip distribution model is shown in Figure 6A. The directional distribution for new primary site trips is:

- 25% to/from the south on NC 96 (Arendell Avenue)
- 20% to/from the north on NC 96 (Arendell Avenue)
- 15% to/from the east on Pearces Road
- 10% to/from the west on Green Pace Road
- 10% to/from the west on US 264
- 10% to/from the east on US 264
- 5% to/from the west on Proctor Street
- 5% to/from the east on Proctor Street

The pass-by trip distribution is shown in Figure 6B. The directional distribution for pass-by trips is:

- 50% to/from the north on NC 96 (Arendell Avenue)
- 50% to/from the south on NC 96 (Arendell Avenue)

4.5 Future Build Volumes

Site trip volumes were added to the future no build volumes to compute the 2024 Future Build volumes. For the Mid-day and PM peaks, pass-by reductions were applied. Primary site trips are shown in Figure 7A, and pass-by trips are shown in Figure 7B, and Future Build volumes are shown in Figure 8.

5.0 Capacity Analysis

5.1 Level of Service Evaluation Criteria

The Transportation Research Board's *Highway Capacity Manual* (HCM) utilizes a term "level of service" (LOS) to measure how traffic operates in intersections and on roadway segments. There are six levels of service ranging from A to F as shown in Table 5.1. Level of service "A" represents low-volume traffic operations and level of service "F" represents high-volume, oversaturated traffic operations. Synchro traffic modeling software is used to determine the LOS and delay for study intersections. Synchro analysis worksheet reports are provided in the Appendix.

Table 5.1 – Highway Capacity Manual

Levels of Service and Control Delay Criteria			
Signalized Intersection		**Unsignalized Intersection**	
Level of Service	Control Delay Per vehicle (seconds)	Level of Service	Delay Range (seconds)
A	≤ 10	A	≤ 10
B	> 10 and ≤ 20	B	> 10 and ≤ 15
C	> 20 and ≤ 35	C	> 15 and ≤ 25
D	> 35 and ≤ 55	D	> 25 and ≤ 35
E	> 55 and ≤ 80	E	> 35 and ≤ 50
F	> 80	F	> 50

5.2 Queueing Evaluation

A queueing analysis was performed using Synchro and SimTraffic simulation, based on a minimum 10-minute seeding, a 60-minute recording period, and 10 runs. The maximum SimTraffic queues and 95th-percentile Synchro queues are provided, along with the turn lane lengths. Synchro and SimTraffic queue reports are provided in the Appendix.

5.3 Level of Service Results

The results of the capacity analyses are discussed by intersection in the following paragraphs. The LOS and delay results are summarized in Table 5.2. The queues are summarized in Tables 5.3 through 5.8.

NC 96 (Arendell Avenue) at Dogwood Drive/ US 264 Westbound Ramp (signalized)

In existing conditions, the overall intersection operates at LOS D during the Mid-day and LOS F during the PM peak hours. The committed improvements of widening NC 96 were incorporated in the analysis for the future conditions. Under future no build conditions, the intersection is expected to operate at LOS E during the Mid-day and LOS F during the PM peak hours. In future build scenarios, the intersection will operate at LOS F during both peak hours. It should be noted that the signal at this intersection has capacity issues on the side-streets in existing conditions regardless of the proposed development. Therefore, during the planned construction of improvements along NC 96, the Town should consider modifying the signal to split phasing on the site-streets to accommodate the volumes from the ramp. It is also recommended to optimize the split timing.

NC 96 (Arendell Avenue) at US 264 Eastbound Ramp (signalized)

The overall intersection operates at LOS B during the Mid-day and LOS C during the PM peak hours under existing, future no build, and future build conditions. No improvements are recommended.

NC 96 (Arendell Avenue) at Pearces Road (signalized)

The overall intersection operates at LOS B in existing conditions in both peak hours. The committed improvements of widening NC 96 were incorporated in the analysis for the future conditions. Under future no build and future build conditions, the intersection LOS is expected to remain at LOS B. No improvements are recommended.

Dogwood Drive at Site Access 1 (unsignalized)

Under future build conditions, the minor-street approach is expected to operate at LOS A in the Mid-day and PM peak hours. The need for left- and right-turn lanes was reviewed based on the NCDOT *Policy on Street and Driveway Access to North Carolina Highways*. Based on projected volumes, auxiliary lanes were not warranted. The site access should be designed in accordance with applicable Town standards. No other improvements are recommended.

NC 96 (Arendell Avenue) at Green Pace Road (unsignalized)

In existing conditions, the overall intersection operates at LOS D during the Mid-day and LOS F during the PM peak hours. The committed improvements of widening NC 96 were incorporated in the analysis for the future conditions. Under future no build and future build conditions, the signalized intersection is expected to operate at LOS B in both peak hours. No other improvements are recommended.

Pearces Road at Proctor Street (unsignalized)

In existing and future no build conditions, the minor-street approach operates at LOS C during the Mid-day and LOS D during the PM peak hours. Under future build conditions, the intersection is expected to operate at LOS D during the Mid-day and LOS E during the PM peak hours. It is recommended to improve this intersection to an all-way stop.

6.0 Internal Protected Stem

The NCDOT *Policy on Street and Driveway Access to North Carolina Highways,* or the Driveway Manual, states that the length of the internal protected stem (IPS) will be determined from the maximum vehicle storage required as measured from the right-of-way line to the nearest conflict point with a minimum recommendation of 100 feet. The main purpose of the 100-foot IPS standard is to provide a buffer distance between the adjacent street and any on-site conflict points or queues, to avoid creating a negative impact to adjacent street traffic flow. Due to the limited depth of the site, 100 feet of IPS cannot be provided at either driveway. However, this can be mitigated by reducing internal conflict points. It is recommended that the site be designed to provide a one-way looping traffic pattern, with proper pavement markings and signs to reinforce this. It is also recommended to maximize IPS length to the greatest extent possible.

7.0 Summary and Conclusion

The Zebulon Cook Out proposed development is located east of NC 96 between Dogwood Drive and Jones Street in Zebulon, NC. It will consist of 2,800 square feet of fast food restaurant with drive-thru and 1,865 square feet party gathering room. One full movement access point is proposed on Dogwood Drive. The expected build-out year for this development is 2024. Information regarding the property was provided by Sambatek.

The Transportation Impact Analysis (TIA) was performed based on the scope agreed upon with the North Carolina Department of Transportation (NCDOT). This site has a trip generation potential of 1,854 daily trips, 238 trips in the Mid-day peak hour, and 218 trips in the PM peak hour.

In conclusion, this study has determined the potential traffic impacts of this development. Improvements are recommended to accommodate the impacts of new development traffic. Table 7.1 summarizes the recommended improvements, which are also reflected in Figure 9. With the recommended improvements in place, the anticipated transportation impacts of the proposed development can be accommodated.

NCDOT Traffic Impact Analysis Need Screening / Scoping Request

TIA Need Screening → TIA Scoping → TIA Submittal

A Traffic Impact Analysis (TIA) may be required for developments based on the site trip generation estimates, site context, or at the discretion of the NCDOT District Engineer. The Applicant or the TIA Consultant shall submit this form along with the site plan to the District Engineer to determine the TIA need and, if a TIA is required, initiate the TIA scoping process. Without an approved scope, the TIA is incomplete and will be rejected until the study is revised to conform to NCDOT's TIA requirements.

☐ The estimated site trips meet NCDOT's TIA trip threshold of 3,000 daily trips.

☒ The estimated site trips meet the municipal TIA trip threshold of 100 peak hour

☐ This project is located in a known STIP and/ or local CIP project #

☐ This project includes a rezoning request.

☐ The proposed site access is located within 1,000 feet of an interchange.

☐ The Applicant requests for a new or modified control-of-access break.

☐ The Applicant requests for a new or modified median break.

Site Plan/Vicinity Map Requirement for TIA Need Screening: While the site plan may not be finalized during the TIA scoping stage, the graphic representation of the proposed development shall provide adequate details on the development scope and context. More specifically, the site plan/map shall clearly show the location and type of each access point, spacing to adjacent and opposing driveways or intersections, internal street network, proposed buildings/parcels with their anticipated uses and sizes at full build-out and, if applicable, any nearby interstate, US, NC or Secondary Roads (SR).

Project Name: Zebulon Cook Out Development **Project Reference Number:** _____

☐ **A TIA is Required by the Local Government.** In addition, the study area is expected to include NCDOT maintained transportation facilities.

☒ **A TIA is Required by NCDOT,** per the *Policy on Street and Driveway Access to North Carolina Highways*.

If either or both of the boxes above are checked, the Applicant/TIA Consultant is hereby requested to fill out as much as possible of the following TIA scoping checklist, and return it along with the supporting documents to NCDOT prior to the scoping meeting.

☐ **A TIA is NOT required**. This decision is based on the development information presented above. Changes in the development plan will require re-evaluation of the TIA need, and may necessitate a TIA. The Applicant should inform the District Engineer of any significant changes in a timely fashion to avoid delays or rejections of the driveway permit / encroachment agreement applications.

☐

Proposed K-12 School Site

☐ NCDOT MSTA School Traffic Calculator for Select School Type shall be used.

☐ Peak Hour Factors (PHFs) shall be adjusted/weighted for new school trips (0.5 PHF by default).

☐ Internal school circulation analysis is required, and should be submitted in advance or concurrent with the TIA submittal.

☐ Clarify traffic operation plans (e.g. traffic circulation pattern, pedestrian access, drop-off/pick-up zone location and configuration, queue storage area and, if applicable, staggered start times).

☒ Trip Generation

The TIA Consultant shall prepare trip generation estimates following the current *NCDOT Congestion Management Capacity Analysis Guidelines*, and submit the calculation sheets and supporting information to the District Engineer for approval prior to capacity analysis.

☒ Study Method

The traffic analysis shall follow the current *NCDOT Congestion Management Capacity Analysis Guidelines*, *Policy on Street and Driveway Access to North Carolina Highways*, and use the current approved version of analysis software (e.g. Synchro/SimTraffic, HCS, Sidra Intersection, TransModeler).

The study shall include the following analysis scenarios for each analysis period.

1. Existing Conditions
2. Future No-Build Conditions (existing + background growth + approved developments + committed or funded improvements)
3. Future Build Conditions (future no-build + site trips)
4. Future Build with Improvements Conditions (future build traffic with improvements to mitigate the proposed development's impacts) and, if applicable:

☐ 5. TIP Design Year Analysis _____

☐ 6. Alternative Access Scenario (without proposed control-of-access or median break / modification)

The following additional analysis/outputs should be provided as warranted:

☐ Signal Warrant Analysis for accesses/intersections _____

☐ Multi-Modal Level of Service Analysis

☐ School Loading Zone Traffic Simulation

☐ Phasing Analysis (scope separately as needed)

☐ Safety/Crash Analysis

☐ Control-of-Access Modification Justification

☐ Median Break / Modification Justification

☐ Other _____

☒ Submittals

In addition to the hardcopies required below, the TIA Consultant shall provide the District Engineer and, if required, the local government an electronic copy of the study documents, including the latest site plan, figures and appendices, in searchable PDF files and the original traffic analysis files (e.g., Synchro, HCS). To expedite review, the NCDOT electronic submittals shall also be delivered concurrently to:

☐ Div. Traffic Engr ☐ Regional Traffic Engr ☐ Congestion Management ☐ Other _____

Submittals	NCDOT		Local Government	
	Electronic	Hardcopy	Electronic	Hardcopy
Trip Generation & Distribution	Required		Required	
Draft TIA Report	Required		Required	
Final Sealed TIA Report	Required		Required	

☐ **Additional Comments** (municipal TIA requirements, approved variations from NCDOT guidelines)

Agreement by All Parties

The undersigned agree to the contents and methodology described above for completing the required traffic impact analysis for the proposed development identified herein. Any changes to the above methodology contemplated by the Applicant or the TIA Consultant must be submitted to the District Engineer in writing. If approved by NCDOT, then such changes may be accepted for the TIA report. Subsequent revisions to the development plan (e.g. land use, density, site access, or schedule) may require additional scoping and analysis, and may modify the TIA requirements.

This agreement shall become effective on the date approved by NCDOT, and shall expire____ months after the effective date or upon significant changes to the roadway network and/or development assumptions, whichever occurs first. Once expired, renewal or re-scoping will be required for subsequent TIA submittals.

☒ The approved TIA Scoping Checklist is included in this submittal.

☒ LOS D or better is expected at all study intersections after proposed mitigations.

☒ The study report is sealed by a NC Professional Engineer with expertise in traffic engineering.

☒ This study has identified all known deficiencies with and without the proposed development.

☒ This study has identified mitigation measures to adequately accommodate the site trips.

Explain here if any of the boxes above are unchecked:

The undersigned affirms that, except for the deviations noted below, the TIA submittal conforms to the current *NCDOT Congestion Management Capacity Analysis Guidelines*, *Policy on Street and Driveway Access to North Carolina Highways*, and the TIA Scoping Checklist approved by the NCDOT District Office. The undersigned also acknowledges that the TIA will be rejected if the deviations and justifications are not properly documented and approved by NCDOT.

Deviations and Justifications (e.g., changes in site plan, development schedule, site trip and off-site trip estimates, study area, data collection, analysis period and method. Attached separate sheets if needed.)

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

(NC 96 - N. Arendell Ave. CLS)
Signal System #: D05_30_Zebulon

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Phase 1 and/or phase 5 may be lagged.
4. Set all detector units to presence mode.
5. Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
6. Program pedestrian heads to countdown the flashing "Don't Walk" time only.
7. The Division Traffic Engineer will determine the hours of use for each phasing plan.
8. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
9. Pedestrian pedestals are conceptual and shown for reference only. See Roadway Standard Drawings 1705.04 for pushbutton location details.
10. Closed loop system data: Controller Asset #: 2250.
